

1

Start by clicking on the icon. On the first use you will be prompted to enter a passcode. Select a 3 - 5 or more characters. To login pick a random segment from the 12 segments on the dial, then turn the dial so each letter in yourcode falls within that segment then press select.

2

Create and name a group by pressing

Create Group

Then share it to your contacts by pressing the group name and sliding it left with your finger.

Your contacts will need to scan this image to join your private chat group. This is done by pressing

Add Shared Group

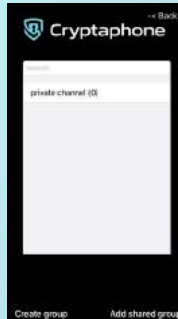

Then pointing their camera at your shared image will add the chat group to their list. This only needs to be done once. This image does not have to be kept secure.

3

To enter a private chat group tap the name of the group in the group list.

You can search for a group name using the search box. Unread messages are shown next to the group name.

4

Each time you enter a chat you need to point your phone's camera at a Barcode or QR CODE image.

These exist everywhere on most product packaging and can be custom created on many websites.

All users in the selected group must use the same image to see the private conversations.
